Norwegian improves company score in global climate CDP ranking??

Norwegian improves and receives the highest possible score in several categories for its emission reduction initiatives in this year's global climate ranking from the international organisation CDP. Norwegian receives an overall score B and the highest possible score in the categories for risk management processes, risk disclosure, and in reporting and verification of direct and indirect energy supply emissions (Scope 1 and 2).

The CDP (Carbon Disclosure Project) is an environmental organisation for the global environmental disclosure system. The CDP publishes annual results for climate ranking. Norwegian's strategy for reducing climate impact is

measured in several categories and for 2023, the airline receives an overall score B, which is an improvement from last year. This is an important recognition to Norwegian's commitment to reduce greenhouse gas emissions.

"We have committed to ambitious targets and are actively taking measures to reduce the company's climate impact. It is therefore both rewarding and motivating to see that the hard work we are doing, leads to improvement in more categories than before. This means a lot to us and confirms that our strategy is working," said Anders Fagernæs, Vice President Sustainability at Norwegian.

Norwegian started disclosing its effort to tackle climate change through CDP in 2021 and has made considerable progress with positive results. Working with transparency via Carbon Disclosure Project is a central element in Norwegian's response to the increasing demand for environmental transparency from investors, financial institutions, customers and policymakers.

"We have a strategy for reducing the company's climate impact, and we believe that the most efficient tool in the nearby future is to increase the use of fossil-free fuels. Besides fossil-free fuels, fleet renewal and advanced weather systems for more fuel-efficient navigation, are additional measures with immediate emissions reduction. We believe that transparency, reporting and openness will make it easier for customers to make qualified choices," said Fagernæs.

About Norwegian

Norwegian is the largest Norwegian airline and one of Europe's leading low-cost carriers. The company has around 4,500 employees and offers a comprehensive route network between Nordic countries and destinations in Europe. Since 2002, more than 300 million passengers have flown with Norwegian. The most important task has been to offer affordable plane tickets to all and to offer more freedom of choice along the journey.

Norwegian is a driving force for sustainable solutions and the transformation

of the aviation industry. The company's goal is to reduce its CO2 emissions by 45 percent within 2030. To this means, the company is renewing its fleet, promoting sustainable aviation fuel, reducing its waste, and using wind and weather data to calculate the most efficient fuel-saving flights routes. Norwegian wants to become the sustainable choice for its passengers.
